

Academic Chatbot

Chat bot app is being made, whilst keeping the perspective of students and academic personals. There are two views of this app – Student View and Admin View – the former is for the students to use the features provided by our app to query regarding timetable, real-time rescheduled classes, room vacant status, realtime announcements from university SLATE portal, policies of university, information of different courses, teacher related information, in natural language i.e. English. Student if in any case feels that the bot didn't give him/her correct answer, student can send his query to admin using the feedback button present at the screen. The latter is for the admin, who will update the answer of the question in case of failure of an answer by the bot.

Features include:

- Academics related queries including University policies, course information, teacher related information and GPA policies.

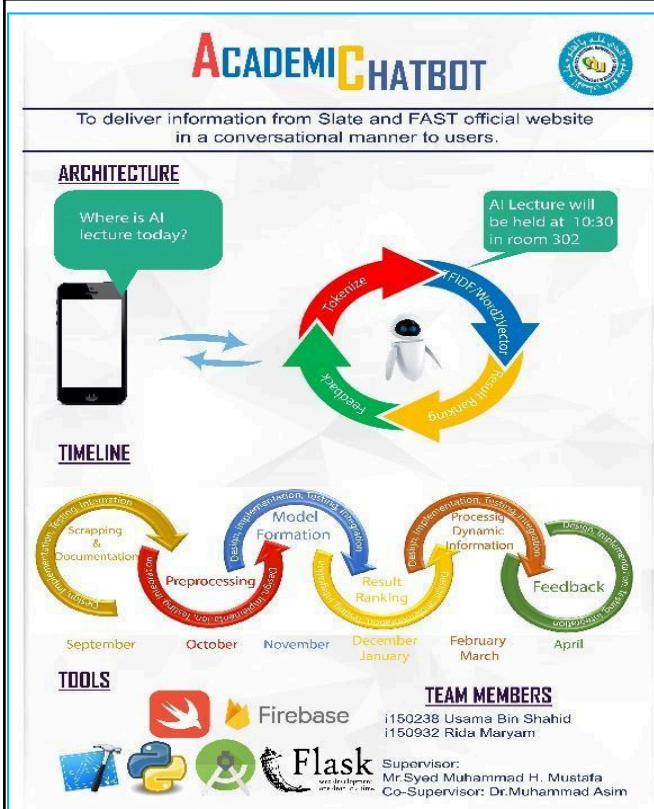

Realtime announcements from university SLATE portal

Timetable related queries including real-time rescheduled classes and room vacant status

Sending query to admin panel in case of failure of answer.

Dataset updated after admin answers the query.
